FOR ENTERAL FEEDING

ENTERAL SYRINGE PUMP

Ameritus now offers a dedicated enteral syringe pump for enteral feeding in the NICU. Safety system from patient to pump. A cost effective solution.
Features

The Ameritus 1ST Enteral Pump is a dedicated syringe pump specifically for enteral feeding in the NICU:

- The Ameritus 1ST Pump functions exclusively with the Ameritus KMS Oral/Enteral Syringes, sizes 3ml - 60ml (Please refer to the complete Ameritus enteral line of oral syringes)
- Orange color coding provides easy visual recognition as an enteral pump
- Clearly labeled “Enteral Feeding Only”
- Automatic syringe detection by size
- Automatically detects syringe volume and calculates the flow rate
- Easy to program, only volume and time adjustments necessary
- Continuous display of rate and feeding duration
- Can operate with both intermittent or continuous feedings
- Must be correctly engaged at the plunger, barrel, and collar before pump will operate for added safety
- Audible and visual alarms
- Pump is virtually silent while operating
- Can be vertically or horizontally mounted using pole clamp
- Cost effective, small and compact, weighing less than 1 lb.
- AC and battery powered, battery operation of 15+ hours
